

Practice 1

Week 1

Seoul National University
Graphics & Media Lab
HyeonSeung Shin

TA Introduction

- TA (Han Donghoon & Shin Hyeonseung)
 - sinhs10@graphics.snu.ac.kr
 - #210, Building 133
 - 880-8879
- Office hour
 - Make appointment

Class Introduction

- Schedule
 - 10+ short program assignments (at each class)
 - 1 large program (as term project) **will be noticed later**
- Reference
 - ETL
 - **Google**
 - **But don't copy code for assignment**

Class Introduction

- Learn Objected-Oriented Programming
 - Object-Oriented Programming
 - in C++
- Learn how to create graphical program
 - Using external library: OpenGL
- **Use C++ like Korean.**

Assignment Submission

- Send E-mail
 - To pmta@graphics.snu.ac.kr
 - Mail Title :
 - Practice_01_Assignment
 - Mail Contents
 - Student ID + Name
 - Attachment
 - One Source code file
 - Write a comment about your student ID and name on the top of the attached file

Until Tuesday
11:59:59 PM

Programming Environment

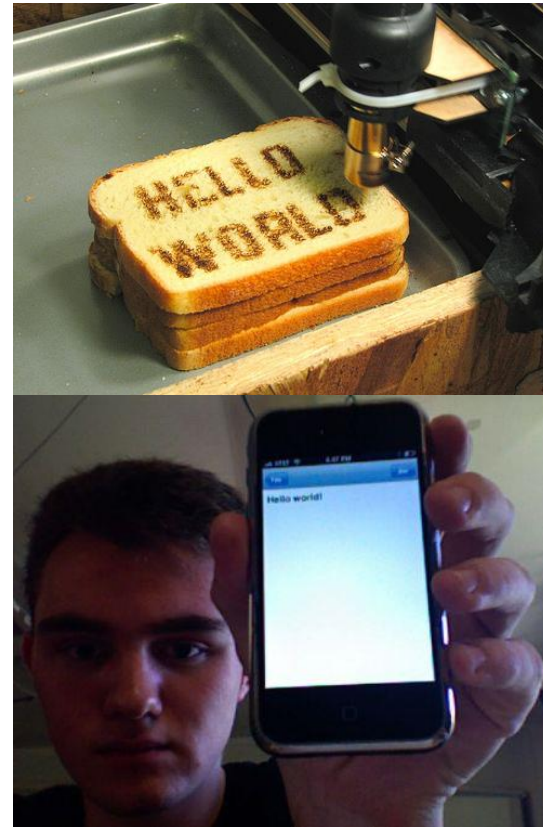

- IDE : Integrated development environment
- Xcode, Eclipse, C++ Builder, etc ...
- We will use "Visual Studio 2017" (or 2015)

Hello World!

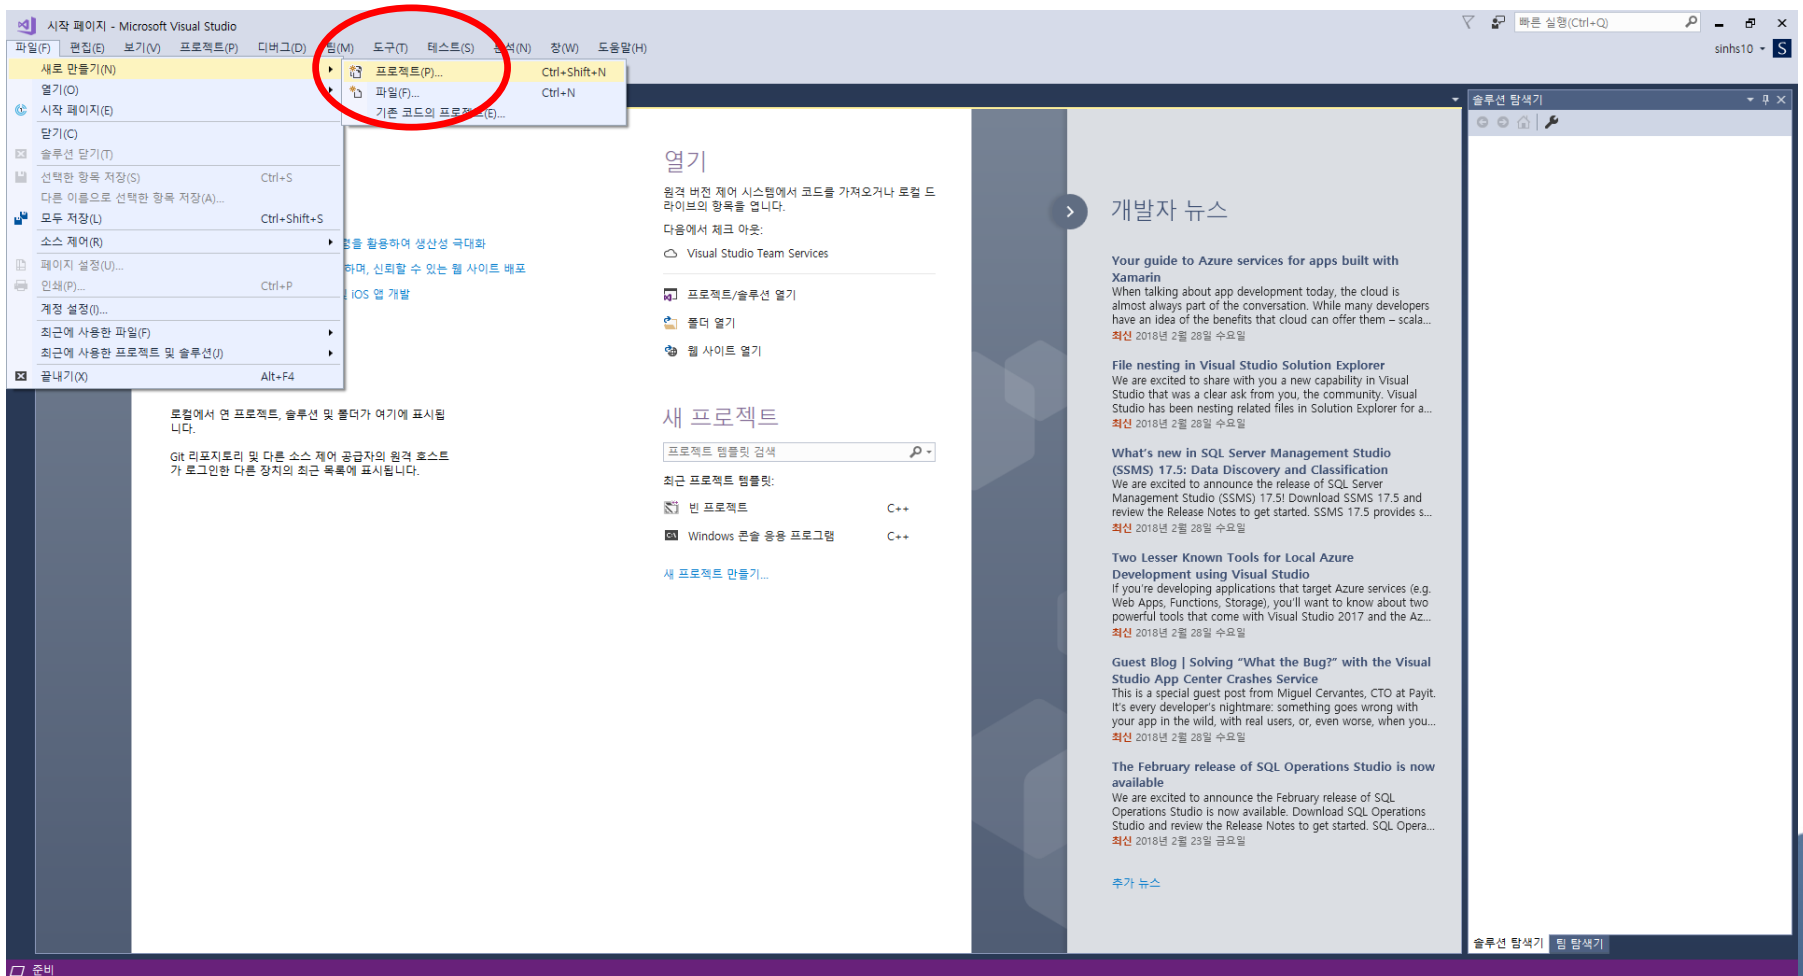

- A "Hello world" program is a computer program that prints out "Hello world" on a display device.
 - It is typically one of the simplest programs possible in most programming languages.
 - By tradition, it is often the first program taught in a beginning class on a particular language.
 - It is also used to illustrate the most basic syntax of a programming language.

- From Wikipedia

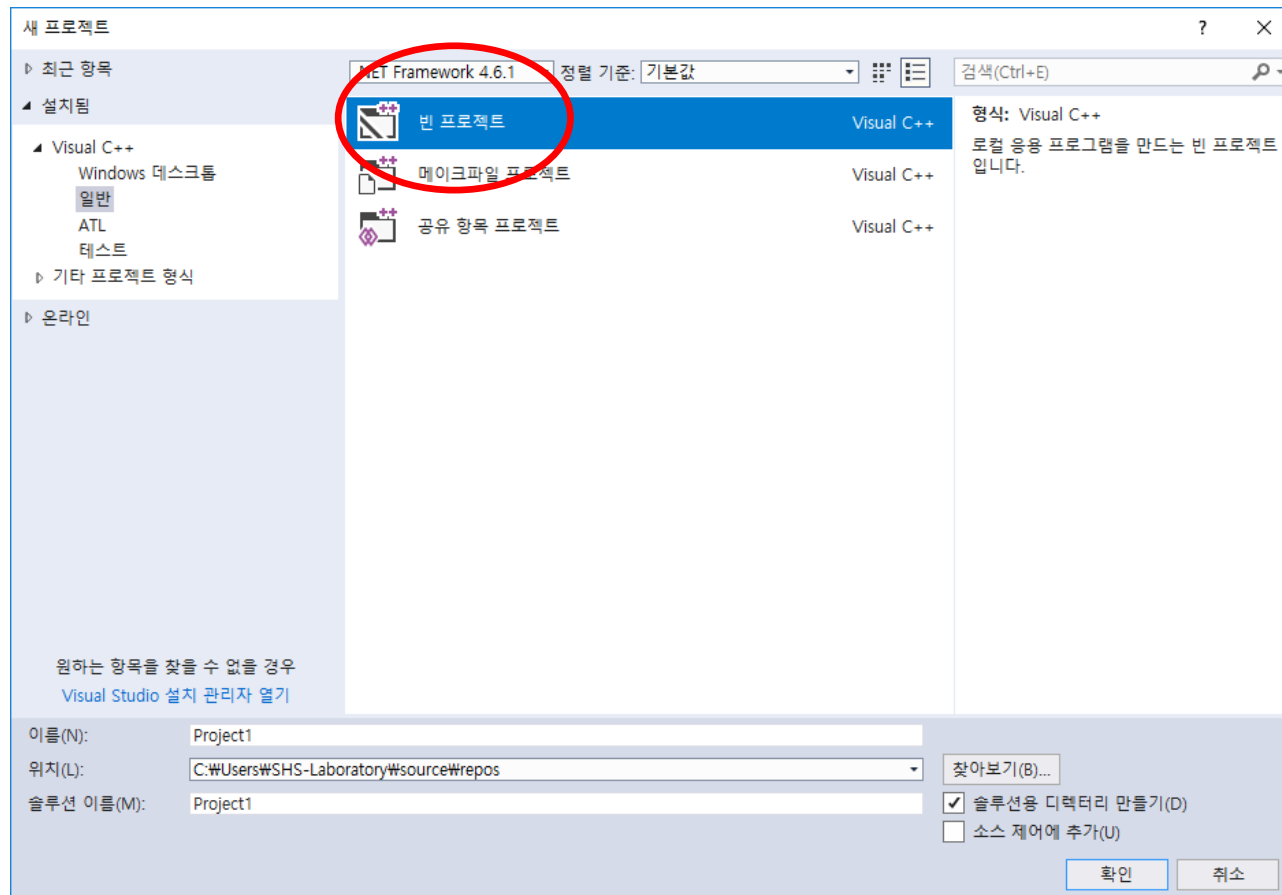

Creating Project

- New project

Creating Project

- New project
 - Empty project

Adding .cpp file

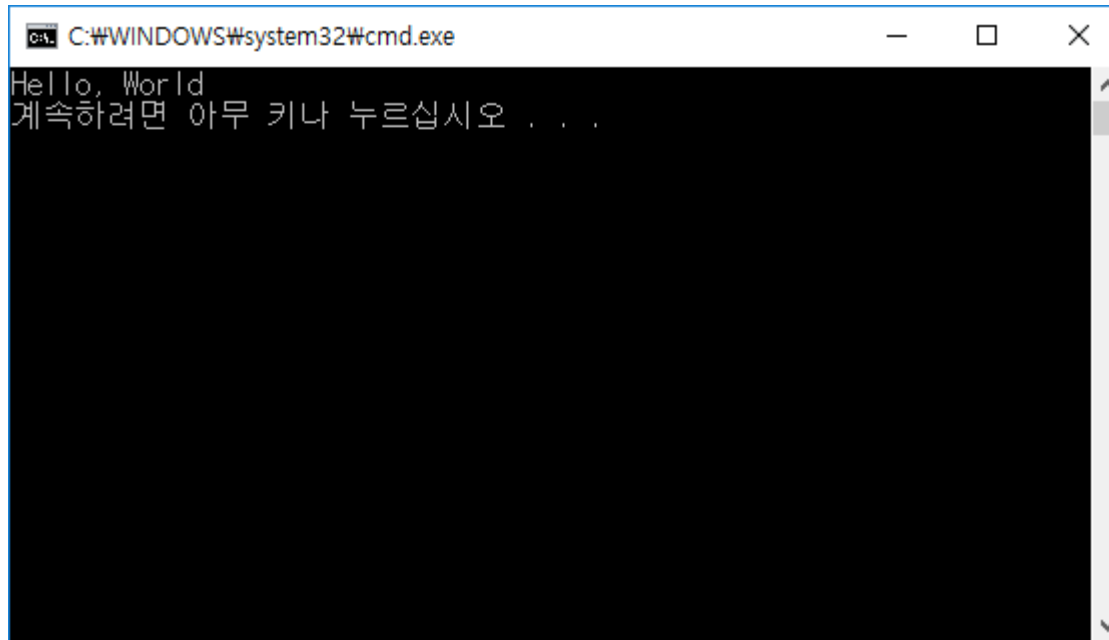

- Add new item
 - C++ file

Hello World!

```
#include <iostream>

void main() {
    std::cout << "Hello, World" << std::endl;
}
```

A screenshot of a Windows command prompt window. The title bar shows the path "C:\WINDOWS\system32\cmd.exe". The window has a black background with white text. The first line of output is "Hello, World". The second line is a Korean message: "계속하려면 아무 키나 누르십시오 . . .". The window has standard Windows window controls (minimize, maximize, close) in the top right corner.

Hello World!

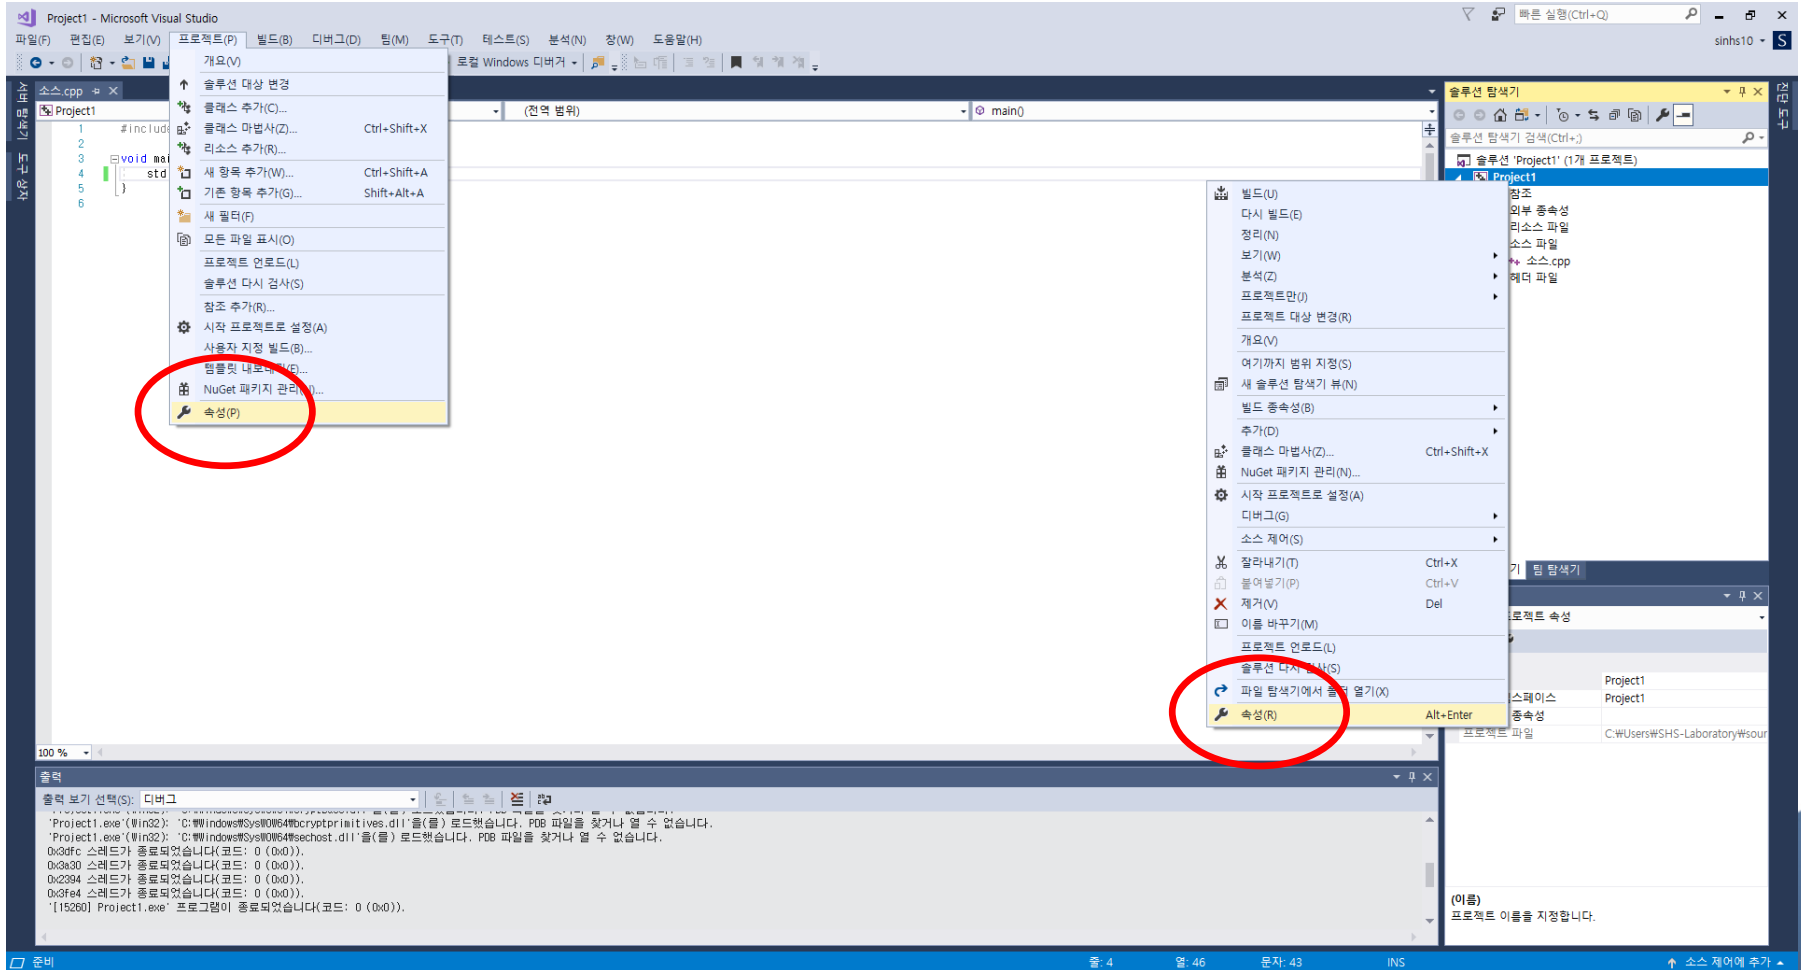

- Keep console (method 1)

```
#include <iostream>

void main() {
    std::cout << "Hello, World" << std::endl;
    system("pause");
}
```

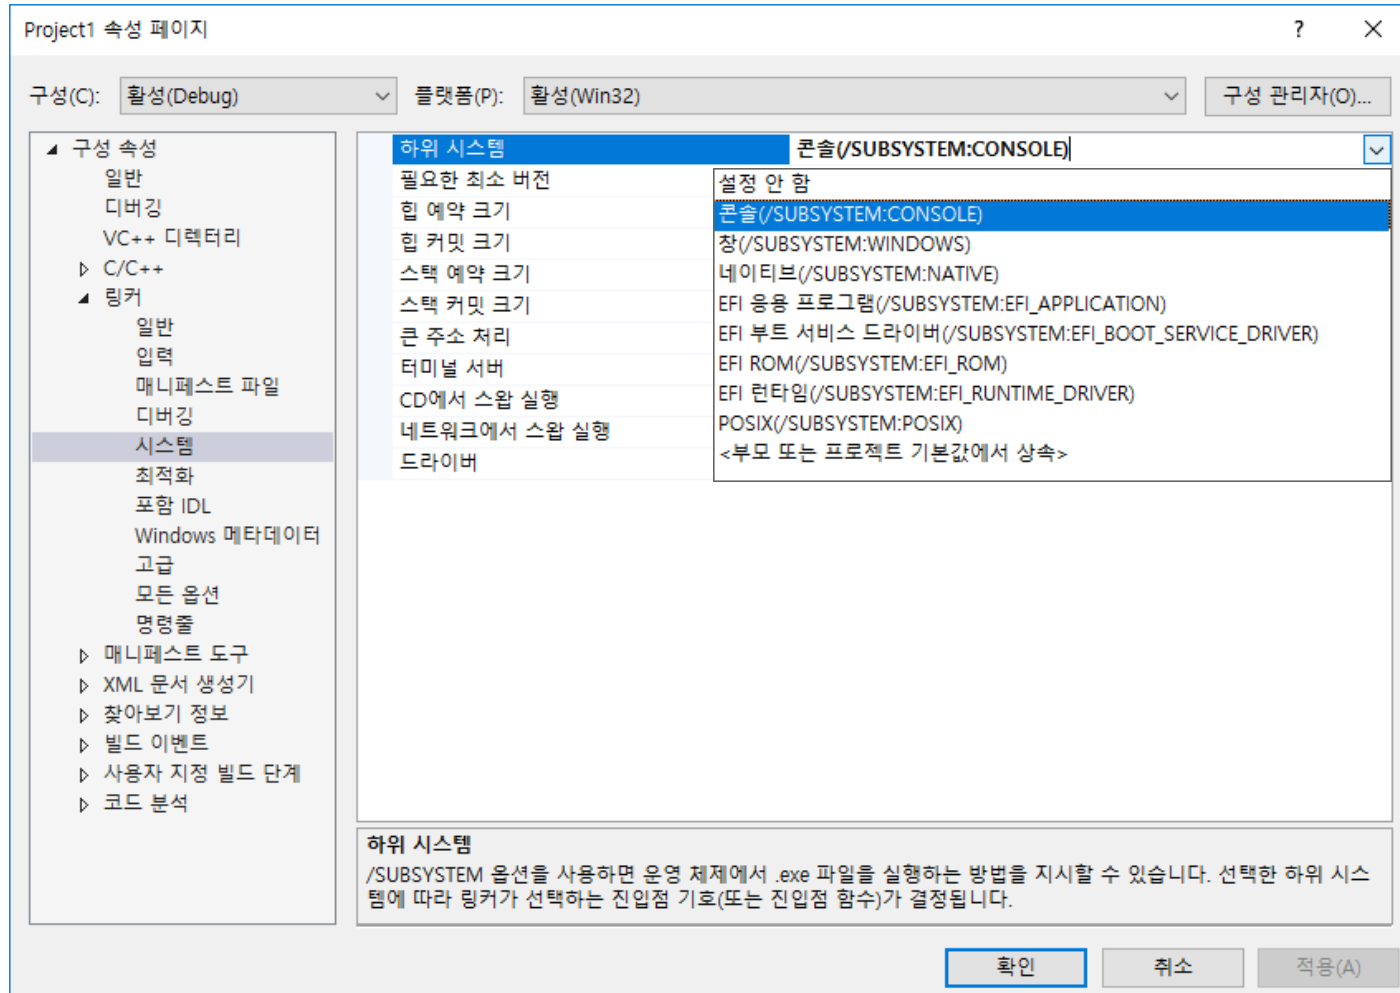

Hello World!

- Keep console (method 2)

Hello World!

- Keep console (method 2)

Hello OpenGL!

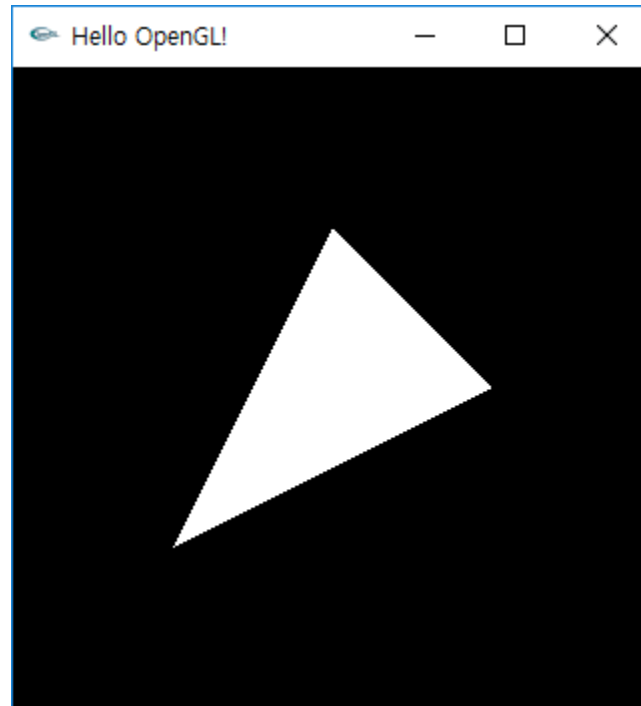

Download GLUT and Link the libraries to Visual Studio.
Execute Sample Code.

Official site : www.opengl.org

OR.. just use files from TA in ETL.

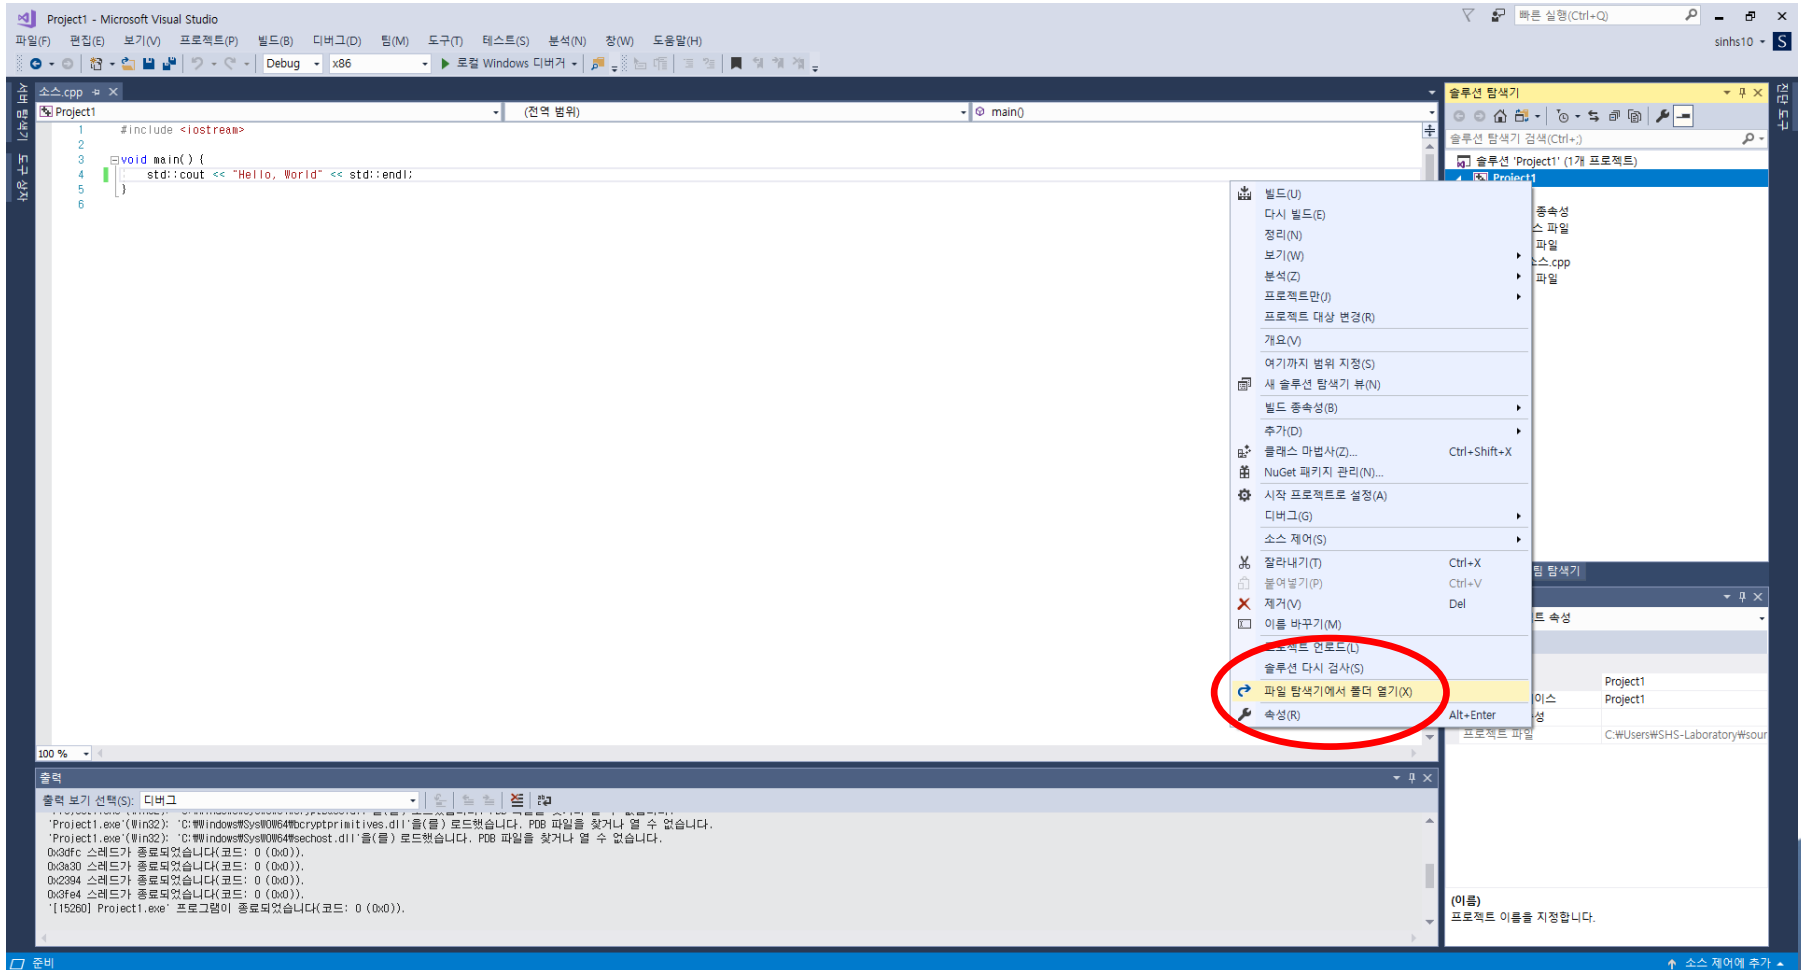

Hello OpenGL!

- Practice OpenGL
 - Create OpenGL project
 - Draw triangle

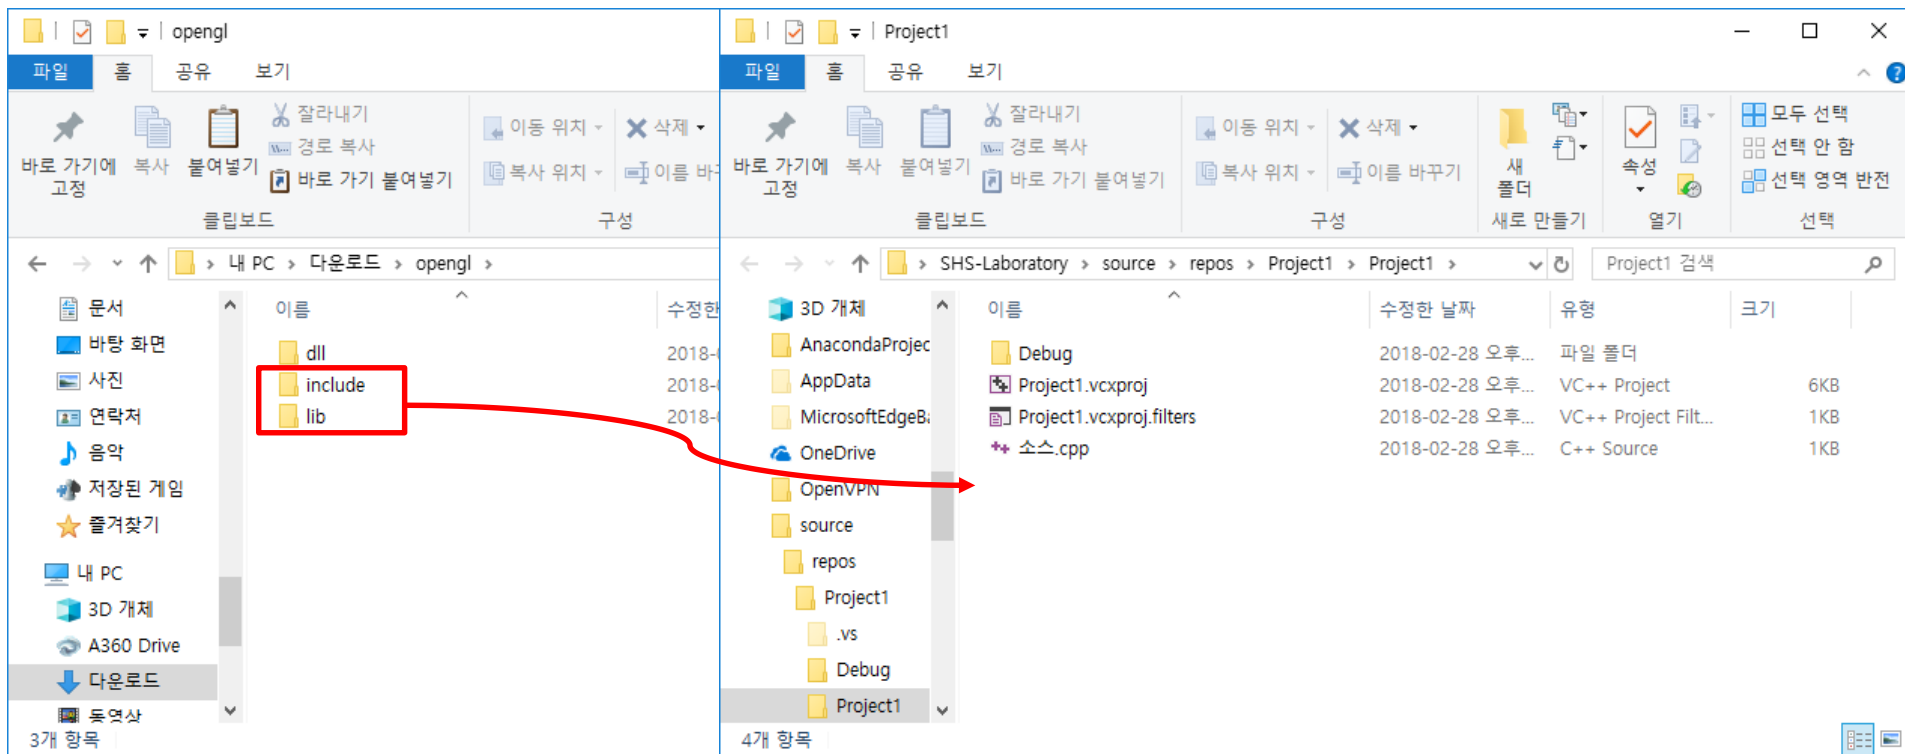

OpenGL project setting

- Open project folder

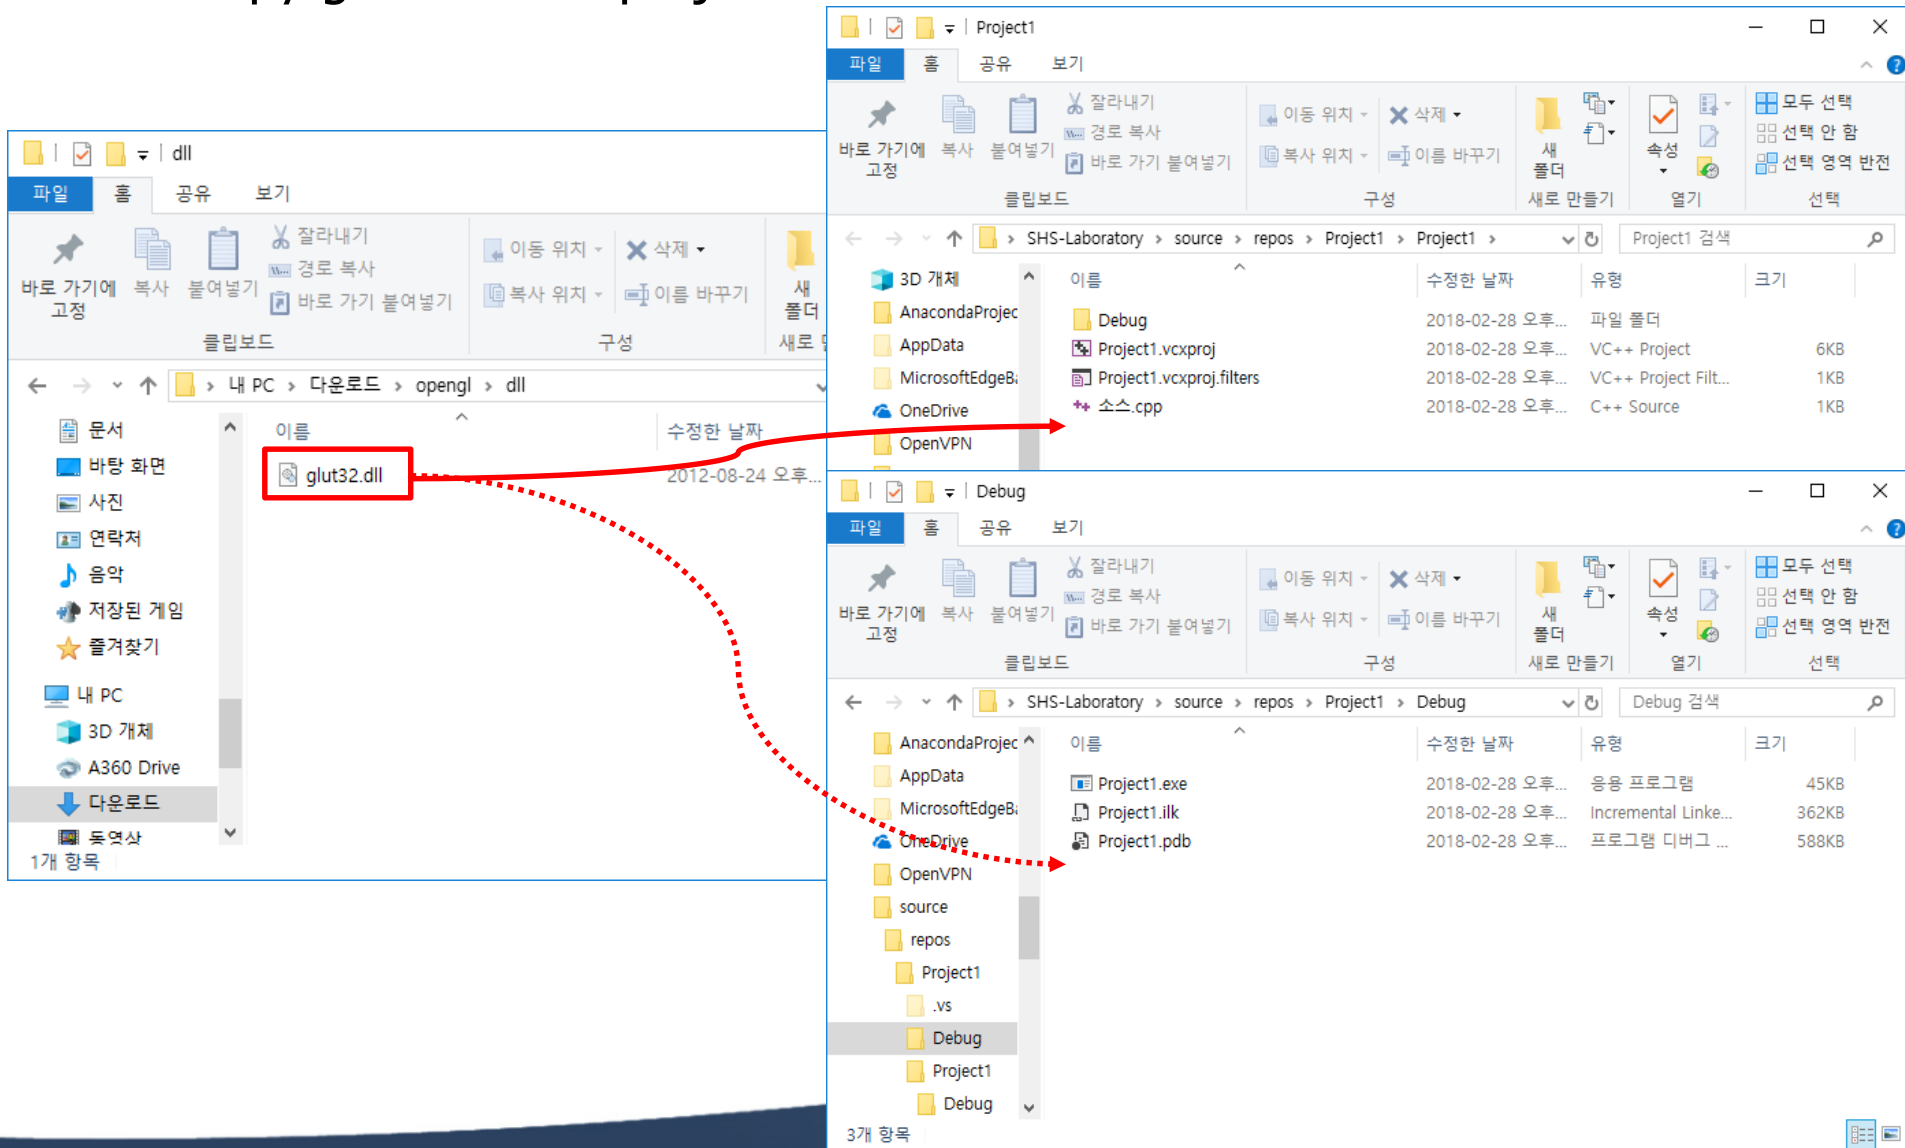

OpenGL project setting

- Copy "include" and "lib" folder to your project folder(with main.cpp)

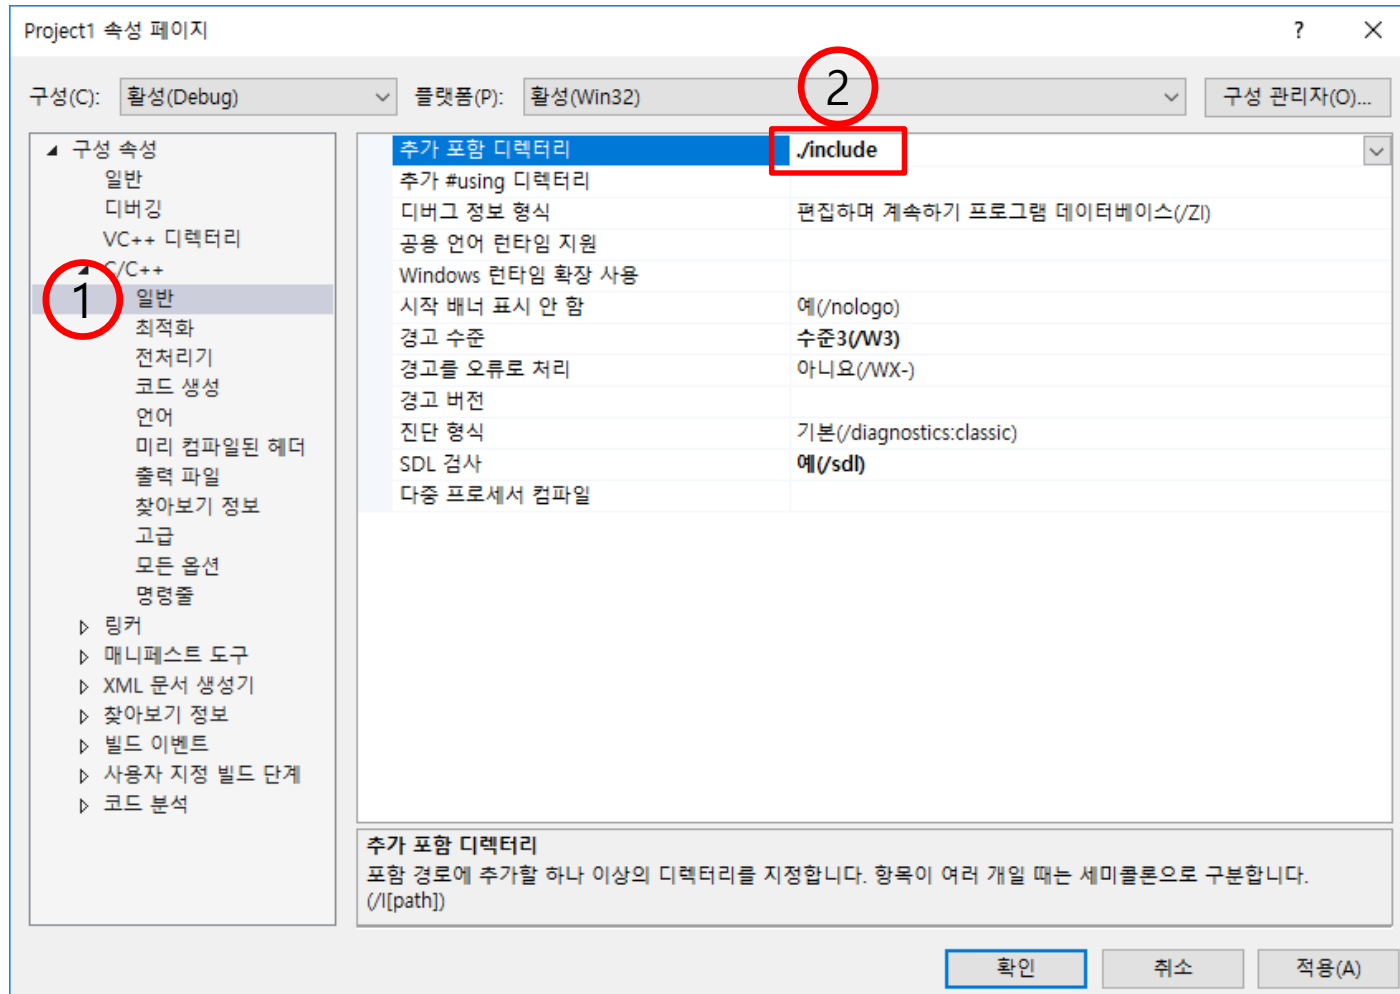

OpenGL project setting

- Copy glut32.dll to project folder or exe folder

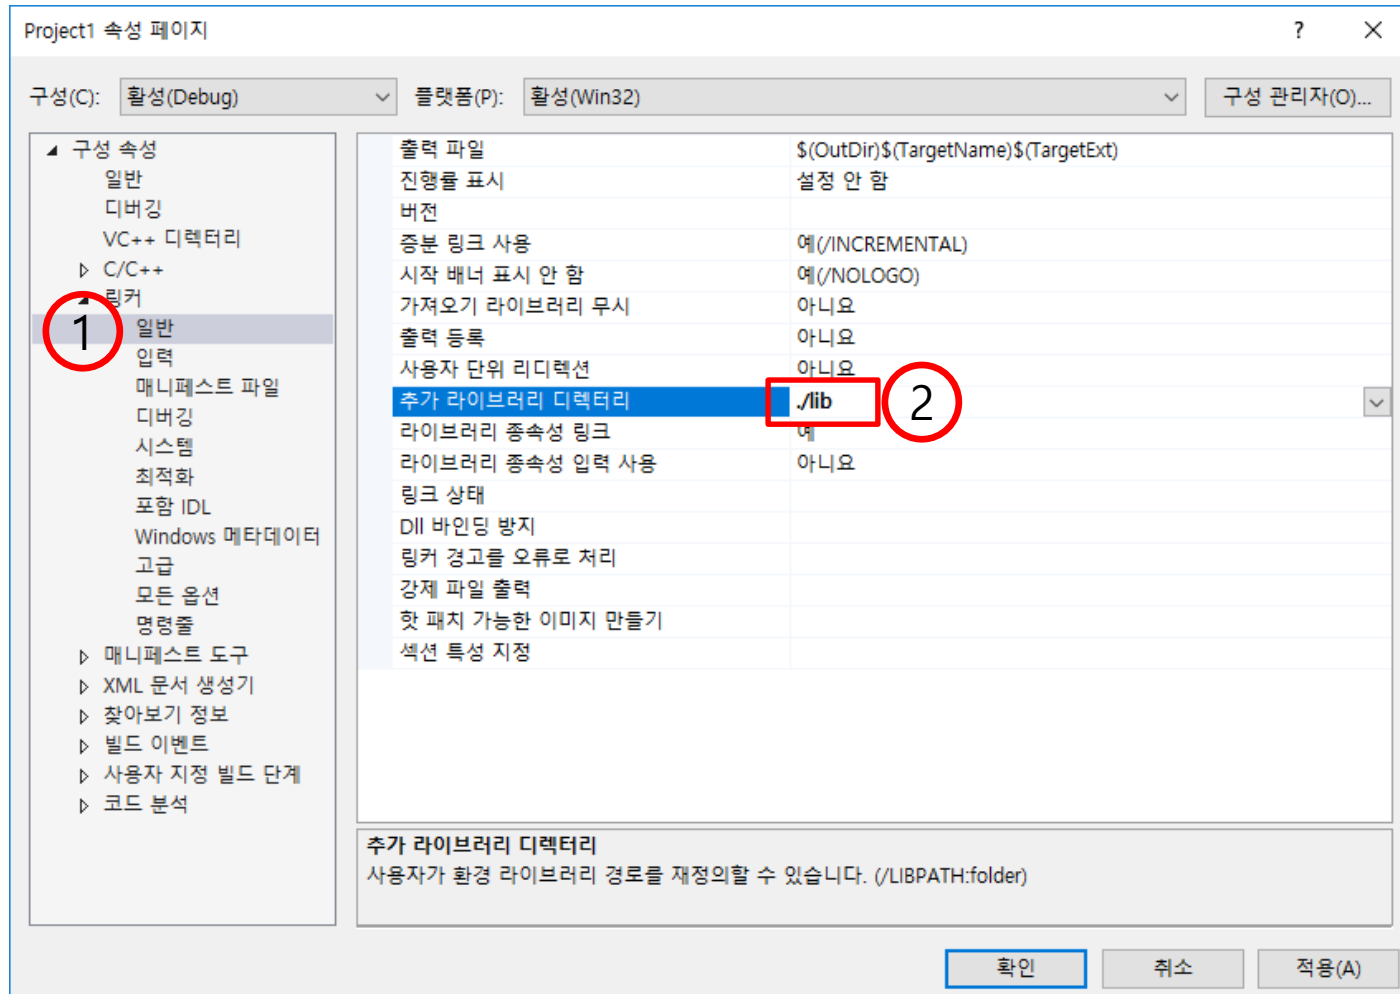

OpenGL project setting

- Properties > C/C++ > General > Additional include directories > Type `\"./include\"`

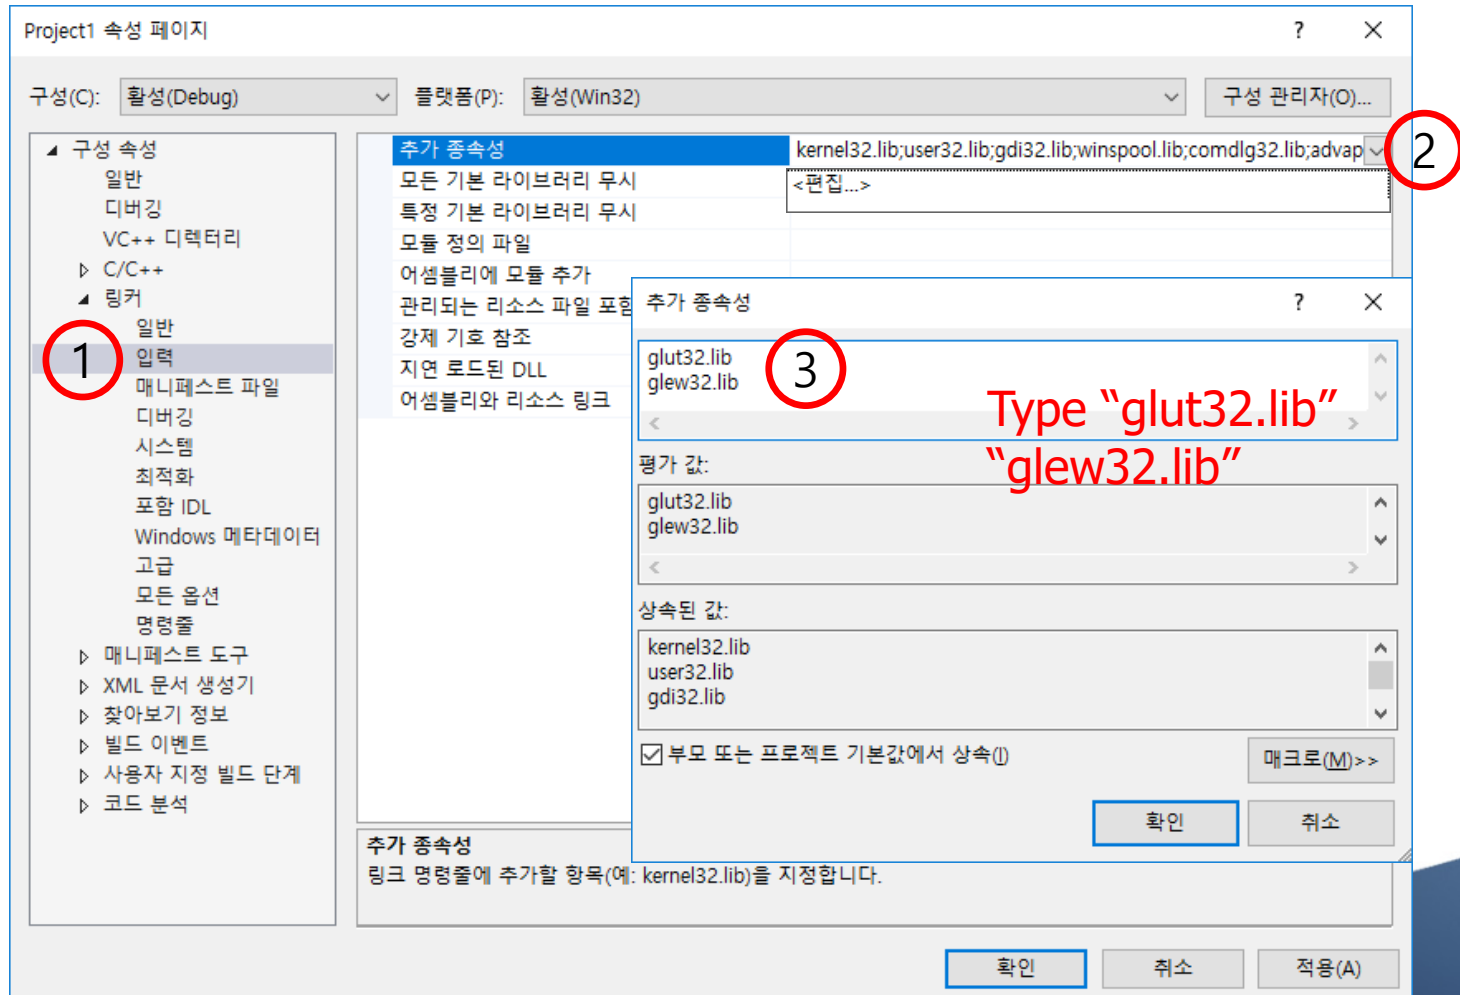

OpenGL project setting

- Properties > Linker > General > Additional library directories > Type
“./lib”

OpenGL project setting

- Properties > Linker > Input > Additional dependencies > Add "glut32.lib", "glew32.lib"

OpenGL sample 01

```
#include <GL/glut.h>
```

```
void renderScene(void) {  
  
    glClear(GL_COLOR_BUFFER_BIT | GL_DEPTH_BUFFER_BIT);  
  
    glBegin(GL_TRIANGLES);  
        glVertex3f(-0.5, -0.5, 0.0);  
        glVertex3f(0.5, 0.0, 0.0);  
        glVertex3f(0.0, 0.5, 0.0);  
    glEnd();  
  
    glutSwapBuffers();  
}  
  
void main(int argc, char **argv) {  
  
    // init GLUT and create Window  
    glutInit(&argc, argv);  
    glutInitDisplayMode(GLUT_DEPTH | GLUT_DOUBLE | GLUT_RGBA);  
    glutInitWindowPosition(100, 100);  
    glutInitWindowSize(320, 320);  
    glutCreateWindow("Hello OpenGL!");  
  
    // register callbacks  
    glutDisplayFunc(renderScene);  
  
    // enter GLUT event processing cycle  
    glutMainLoop();  
}
```

Hello OpenGL!
