

Lecture 3

C++ Basics III

IO Streams and Headers

Seoul National University
Graphics & Media Lab

Contents

- Input and Output (8.1, 8.2)
- File Input and Output (8.4)
- Header file handling (2.9, 7.4)

Keyboard Input and Screen Output

```
#include <stdio.h>
```

C style

```
void main() {  
    char c0 = 'a';  
    int i0 = 3, x;  
    float f0 = 3.141592f;  
  
    printf("%c %d %d %f\n", c0, c0, i0, f0);  
    scanf("%d", &x);  
    printf("%d\n", x);  
}
```

ASCII Code Table

Dec	Hex	Char	Dec	Hex	Char	Dec	Hex	Char	Dec	Hex	Char
0	00	Null	32	20	Space	64	40	@	96	60	`
1	01	Start of heading	33	21	!	65	41	A	97	61	a
2	02	Start of text	34	22	"	66	42	B	98	62	b
3	03	End of text	35	23	#	67	43	C	99	63	c
4	04	End of transmit	36	24	\$	68	44	D	100	64	d
5	05	Enquiry	37	25	%	69	45	E	101	65	e
6	06	Acknowledge	38	26	&	70	46	F	102	66	f
7	07	Audible bell	39	27	'	71	47	G	103	67	g
8	08	Backspace	40	28	(72	48	H	104	68	h
9	09	Horizontal tab	41	29)	73	49	I	105	69	i
10	0A	Line feed	42	2A	*	74	4A	J	106	6A	j
11	0B	Vertical tab	43	2B	+	75	4B	K	107	6B	k
12	0C	Form feed	44	2C	,	76	4C	L	108	6C	l
13	0D	Carriage return	45	2D	-	77	4D	M	109	6D	m
14	0E	Shift out	46	2E	.	78	4E	N	110	6E	n
15	0F	Shift in	47	2F	/	79	4F	O	111	6F	o
16	10	Data link escape	48	30	0	80	50	P	112	70	p
17	11	Device control 1	49	31	1	81	51	Q	113	71	q
18	12	Device control 2	50	32	2	82	52	R	114	72	r
19	13	Device control 3	51	33	3	83	53	S	115	73	s
20	14	Device control 4	52	34	4	84	54	T	116	74	t
21	15	Neg. acknowledge	53	35	5	85	55	U	117	75	u
22	16	Synchronous idle	54	36	6	86	56	V	118	76	v
23	17	End trans. block	55	37	7	87	57	W	119	77	w
24	18	Cancel	56	38	8	88	58	X	120	78	x
25	19	End of medium	57	39	9	89	59	Y	121	79	y
26	1A	Substitution	58	3A	:	90	5A	Z	122	7A	z
27	1B	Escape	59	3B	;	91	5B	[123	7B	{
28	1C	File separator	60	3C	<	92	5C	\	124	7C	
29	1D	Group separator	61	3D	=	93	5D]	125	7D	}
30	1E	Record separator	62	3E	>	94	5E	^	126	7E	~
31	1F	Unit separator	63	3F	?	95	5F	_	127	7F	□

Keyboard Input and Screen Output

```
#include <stdio.h>
```

C style

```
void main() {  
    char c0 = 'a';  
    int i0 = 3, x;  
    float f0 = 3.141592f;  
  
    printf("%c %d %d %f\n", c0, c0, i0, f0);  
    scanf("%d", &x);  
    printf("%d\n", x);  
}
```

```
#include <iostream>
```

C++ style

```
void main() {  
    char c0 = 'a';  
    int i0 = 3, x;  
    float f0 = 3.141592f;  
  
    std::cout << c0 << " " << i0 << " " << f0 << std::endl;  
    std::cin >> x;  
    std::cout << x << std::endl;  
}
```

Typical Input Loop

- A typical way of getting user-inputs with a loop structure

```
#include <iostream>

void main() {
    int ival, sum = 0;

    while(std::cin >> ival, !std::cin.eof()) {
        // do something with ival...,
        // e.g., sum += ival;
    }
    std::cout << "Sum : " << sum << std::endl;
}
```

File Input and Output

- ifstream stands for 'input file stream'.
- ofstream stands for 'output file stream'.
- fstream can be used as either an input or an output file stream.

```
#include <iostream>
#include <fstream>

void main() {
    std::ifstream fs_1("a.txt");
    std::ofstream fs_2("b.txt");
    std::fstream out_fs("test.txt", std::fstream::out);
    int i;

    fs_1 >> i;
    fs_2 << "Programming Methodology" << std::endl;
    out_fs << "is easy";
    fs_1.close(); fs_2.close(); out_fs.close();
}
```

Header File Handling

- Header file is the feature which allows programmers to reuse certain portion of the source code.
- Encountering `#include`, the preprocessor of C++ compiler inserts the source of the header file at that location.

```
#include <iostream>
```

Box.h

```
class Box {  
public:  
    void print() { std::cout << height << " " << width << " " << length;}  
    double height, width, length;  
};
```

```
#include "Box.h"
```

main.cpp

```
void main() {  
    Box box;  
    box.height = 3; box.width = 5; box.length = 7;  
    box.print();  
}
```

Header File Handling

- Headers are for **declarations**, not definitions.
 - Because headers are included in multiple source files, they should not contain definitions of variables or functions.

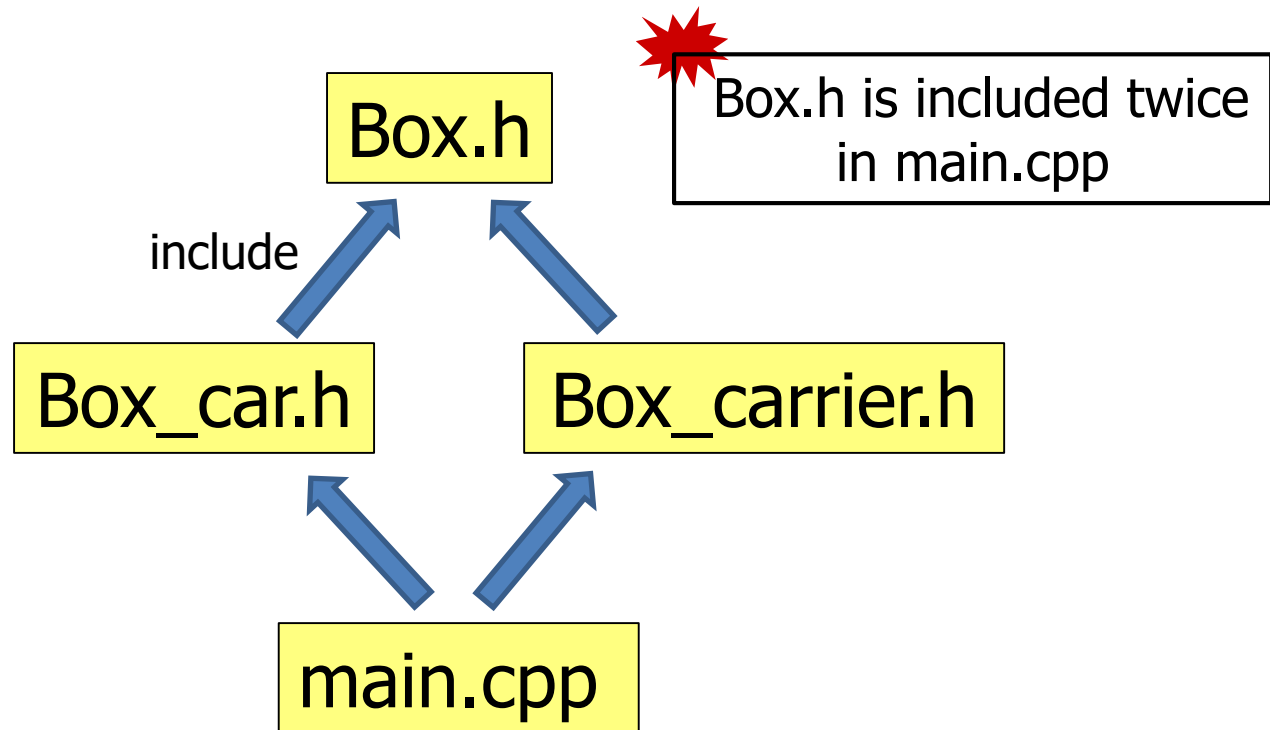

```
// declaration
class BOX {
public :
    double height, width, length;
};

Box box; // definition (x)
int integer0; // definition (x)
```

Box.h

Header File Handling

- Including a header file more than once causes **multiple definitions** of the classes and objects that the header file defines.
 - It causes compilation errors.

Header File Handling

- Including a header file more than once causes **multiple definitions** of the classes and objects that the header file defines.
 - It causes compilation errors.
 - We can solve the problem using `#ifndef`

Box.h

```
#include <iostream>

class Box {
public:
    void print() { std::cout << height << " " << width << " " << length;}
    double height, width, length;
};
```

main.cpp

```
#include "Box.h"

void main() {
    Box box;
    box.height = 3; box.width = 5; box.length = 7;
    box.print();
}
```

Header File Handling

- Including a header file more than once causes **multiple definitions** of the classes and objects that the header file defines.
 - It causes compilation errors.
 - We can solve the problem using `#ifndef`

```
#ifndef _BOX_H_
#define _BOX_H_

#include <iostream>

class Box {
public:
    void print() { std::cout << height << " " << width << " " << length; }
    double height, width, length;
};
#endif
```

Box.h

```
#include "Box.h"

void main() {
    Box box;
    box.height = 3; box.width = 5; box.length = 7;
    box.print();
}
```

main.cpp

Header File Handling

- Including a header file more than once causes **multiple definitions** of the classes and objects that the header file defines.
 - It causes compilation errors.
 - We can solve the problem using `#ifndef`

```
#pragma once ← Preprocessor에게 이 파일을 한번만 읽어들이라는 지시
```

Box.h

```
#include <iostream>

class Box {
public:
    void print() { std::cout << height << " " << width << " " << length;}
    double height, width, length;
};
```

```
#include "Box.h"
```

main.cpp

```
void main() {
    Box box;
    box.height = 3; box.width = 5; box.length = 7;
    box.print();
}
```
